

WHAT CAN YOU DO?

Green your commute

Choose self-powered or mass transit. You'll lower your GHG emissions and keep fit.

Be energy efficient

Turn off lights and unplug electronics when not in use and purchase efficient appliances.

Be informed & get involved

Do your part and make sure our leaders do as well!

Throw away less garbage

Landfills are a leading producer of methane gas—recycle instead.

Reduce, reuse, and recycle

Conserve energy, save money, and reduce emissions from manufacturing.

Use water more efficiently

It takes a lot of energy to pump and treat water. Saving water reduces GHG emissions.

Buy and eat local foods

Choose foods that are local, organic, and low on the food chain.

Choose renewable power options

You can buy green power or modify your house to create your own.

Fly less

Flying has a greater impact per passenger mile than any other mode of transport.

Support and donate

Help the groups that can make a difference to be able to do so—see website for a list.
